

**DRAFT**

**COMPARISON**

**OF THE**

**WHO ATC CLASSIFICATION**

**&**

***Eph*MRA/PBIRG ANATOMICAL  
CLASSIFICATION:**

**VERSION June 2017**

## Comparison of the WHO ATC Classification and EphMRA / PBIRG Anatomical Classification

The following booklet is designed to improve the understanding of the two classification systems. The development of the two systems had previously taken place separately. EphMRA and WHO are now working together to ensure that there is a convergence of the 2 systems rather than a divergence.

In order to better understand the two classification systems, we should pay attention to the way in which substances/products are classified.

**WHO** mainly classifies **substances** according to the therapeutic or pharmaceutical aspects and in one class only (particular formulations or strengths can be given separate codes, e.g. clonidine in C02A as antihypertensive agent, N02C as anti-migraine product and S01E as ophthalmic product).

**EphMRA** classifies **products**, mainly according to their indications and use. Therefore, it is possible to find the same compound in several classes, depending on the product, e.g., NAPROXEN tablets can be classified in M1A (antirheumatic), N2B (analgesic) and G2C if indicated for gynaecological conditions only.

The purposes of classification are also different:

The main purpose of the WHO classification is for international drug utilisation research and for adverse drug reaction monitoring.

This classification is recommended by the WHO for use in international drug utilisation research.

The EphMRA/PBIRG classification has a primary objective to satisfy the marketing needs of the pharmaceutical companies. Therefore, a direct comparison is sometimes difficult due to the different nature and purpose of the two systems.

The aim of harmonisation is to reach a “full” agreement of all mono substances in a given class as listed in the WHO ATC Index, mainly at third level: whenever this is not possible, or harmonisation of third level is

too difficult or makes no sense (e.g. C2, R3), the second level will be taken as the reference class.

Harmonisation is not a simple adaptation of two systems; harmonisation is clearly an improvement of the existing systems.

In view of the increasing use of the WHO classification by national and international authorities and institutions with different objectives, it is opportune to have a harmonised classification.

The main benefit is that all parties involved in a given topic, use the same definitions, same substances, and therefore the discussions are easier.

In line with the harmonisation procedure of WHO/EphMRA, this booklet has been prepared to facilitate cross-comparison. The comparison has been based on the WHO guidelines. Whenever possible, we have checked all molecules included in the current WHO/ATC Index with the EphMRA coding.

We have tried to simplify the document and for this reason and according to the pre-agreed mandate of harmonisation, only the 3rd level has been used as a point of reference.

However, in some cases (e.g. A2B1 antiulcer and group L) we have also mentioned the 4th levels in our comparison.

Where the two groups are similar, on the *EphMRA* side only the code and the title has been added.

Where a difference exists, this has been notified using the following symbols:

- ❖ This class/code does not exist (e.g. A03B)
- ➡ The heading or the content of this class may be different (e.g. N5C).
- These substances are classified in a different class.
- + This class is covered by more than one *EphMRA*/PBIRG or WHO class

A lot of discrepancies concern rather obsolete products for which there is no need for harmonisation (e.g. products withdrawn from the market, sales of minor importance).

We hope this booklet will improve both the use and understanding of the two systems, in particular for those companies in which the two systems are used by different departments (medical and marketing).

The Committee has tried to make a comprehensive comparison of both systems, but cannot guarantee a 100% level of accuracy.

For complete guidelines on the WHO ATC systems refer to “Guidelines for ATC classification” and for the *Eph*MRA/PBIRG Anatomical classification system refer to “*Eph*MRA / PBIRG classification”.

To obtain the guidelines please contact:

## **WHO (Substance based)**

## **EphMRA (Product based)**

---

N06C PSYCHOLEPTICS AND PSYCHOANALEPTICS IN COMBINATION

N6C PSYCHOLEPTIC-PSYCHOANALEPTIC COMBINATIONS

---

N06D ANTI-DEMENTIA DRUGS

- Ipidacrine is classified here.

N7D ANTI-ALZHEIMER PRODUCTS

- Ipidacrine is classified in N7X.

---

**N07 OTHER NERVOUS SYSTEM DRUG**

**N7 OTHER CNS DRUGS**

N07A PARASYMPATHOMIMETICS

- Nalorphine, naltrexone, naloxone and flumazenil are classified in V03A.
- Cevimeline is classified here.
- Alemtuzumab is classified in L04A A.

❖ OTHER CNS DRUGS

Included in N7X

- Nalorphine, naltrexone, naloxone, flumazenil, and ipidacrine are classified in N7X.
- Cevimeline is classified in A01A.
- Alemtuzumab when indicated for multiple sclerosis is classified here.

---

**N07B DRUGS USED IN ADDICTIVE DISORDERS**

N07B A Drugs used in nicotine dependence

- Bupropion is classified in N6A.

N7B ANTISMOKING PRODUCTS

- Bupropion is classified here and in N6A (antidepressant).

N07B B Drugs used in alcohol dependence

- Nalmefene is classified here.

N7E DRUGS USED IN ALCOHOL DEPENDENCE

- Nalmefene is also classified in N7X.

N07B C Drugs used in opioid dependence

N7F DRUGS USED IN OPIOID DEPENDENCE

---

N07C ANTIVERTIGO PREPARATIONS

N7C ANTIVERTIGO PREPARATIONS

N7A MULTIPLE SCLEROSIS PRODUCTS

- Natalizumab and ocrelizumab are classified here.

## WHO (Substance based)

## EphMRA (Product based)

- Natalizumab and ocrelizumab are classified in L04AA.
- Alemtuzumab, fingolimod, and terflunomide are classified in L04AA.
- Daclizumab is classified in L04A C.

- Daclizumab is classified here, except when indicated for kidney transplantation when it is classified in L4C.
- Alemtuzumab, dimethyl fumarate, fingolimod, glatiramer acetate, laquinimod, terflunomide, etc when indicated for multiple sclerosis are classified here.
- Beta interferons indicated for multiple sclerosis only are classified here.
- Fampridine is classified in N7X.

N07X

OTHER NERVOUS SYSTEM DRUGS

- Sugammadex is classified in V03A B here.
- Topical capsicum, when used for neuropathic pain, is classified in N01B.
- Cannabinoids (cannabidiol and tetrahydrocannabinol) are classified in N02B.

N7X

ALL OTHER CNS DRUGS

- Sugammadex is classified here.
- Topical capsicum, when used for neuropathic pain, is classified here.
- Cannabinoids (cannabidiol and tetrahydrocannabinol) are classified here.
- Ipidacrine is classified here.
- Nalmefene is also classified in N7E.
- Pilocarpine when indicated for dry mouth and dry eye are classified here.

## **WHO (Substance based)**

## **EphMRA (Product based)**

**P ANTIPARASITIC PRODUCTS, INSECTICIDES AND REPELLENTS**

**This group is subdivided according to types of parasites**

**P01 ANTIPROTOZOALS**

**P01A AGENTS AGAINST AMOEBIASIS AND OTHER PROTOZOAL DISEASES**

- Systemic metronidazole is classified here and in J01X D.
- Clioquinol, chlorquinaldol, tilbroquinol and glycobarsol are classified here.

**P01B ANTI-MALARIALS**

- Chloroquine and hydroxychloroquine are classified here.

**P01C AGENTS AGAINST LEISHMANIASIS AND TRYPANOSOMIASIS**

**P02 ANTHELMINTICS**

The anthelmintics are subdivided according to the main type of worms (i.e. trematodes, nematodes and cestodes) causing the infections.

- Levamisole is classified here.
- Ivermectin is classified in here and in D11A.

**P PARASITOLOGY**

**P1 ANTI-PARASITIC PRODUCTS**

**P1A AMOEBICIDES**

- Nitroimidazole derivatives are classified either in G1A or J8B.
- Clioquinol, chlorquinaldol, tribroquinol and glycobarsol are classified in A7A.

**P1D ANTI-MALARIALS**

- Chloroquine and hydroxychloroquine are classified here and in M1C.

**P1G OTHER ANTI-PARASITIC AGENTS**

**P1C SCHISTOSOMICIDES**

+

**P1B ANTHELMINTICS, EXCL. SCHISTOSOMICIDES**

- Levamisole is classified here in L3A.
- Ivermectin is classified in here and in P3A, depending on indication.

## **WHO (Substance based)**

## **EphMRA (Product based)**

---

**P03**      **ECTOPARASITICIDES, INCL. SCABICIDES,  
INSECTISIDES AND REPELLENTS**

---

**P3**      **ECTOPARASITICIDES, INCL. SCABICIDES, INSECTISIDES  
AND REPELLENTS**

---

P03A      ECTOPARASITICIDES, INCL. SCABICIDES

- Ivermectin is classified in P02C and D11A.

---

P3A      ECTOPARASITICIDES, incl. SCABICIDES

- Ivermectin is classified here and in P1B, depending on indication.

---

P03B      INSECTICIDES AND REPELLENTS

- Dimethylphthalate is classified here.

---

P3B      INSECTICIDES AND REPELLENTS

- Dimethylphthalate is classified in D4A.
-

## **WHO (Substance based)**

## **EphMRA (Product based)**

---

**R RESPIRATORY SYSTEM****R01 NASAL PREPARATIONS**

R01A DECONGESTANTS AND OTHER NASAL PREPARATIONS FOR TOPICAL USE

R01B NASAL DECONGESTANTS FOR SYSTEMIC USE

---

**R02 THROAT PREPARATIONS**

R02A THROAT PREPARATIONS

- Preparations for the treatment of throat infections (lozenges for common cold condition) are classified here.

---

**R03 DRUGS FOR OBSTRUCTIVE AIRWAY DISEASES**

This group is harmonized on the second level.

- Alfa 1 antitrypsin (alpha-1-proteinase inhibitor) is classified in B02A.
- Azelastine is classified in R06A.
- Ketotifen is classified in R06A.
- Terfenadine is classified in R06A.

---

**R RESPIRATORY SYSTEM****R1 NASAL PREPARATIONS**

R01A TOPICAL NASAL PREPARATIONS

R1B SYSTEMIC NASAL PREPARATIONS

---

**R2 THROAT PREPARATIONS**

R2A THROAT PREPARATIONS

- Products indicated for both the posterior part of the mouth and throat infections are classified in R2A or A1A depending on the main indication.
- Nimesulide in throat preparations is also here.

---

**R3 ANTI-ASTHMA AND COPD PRODUCTS**

- Alpha-1-proteinase inhibitor (alfa 1 antitrypsin) is classified here.
- Azelastine is classified here.
- Ketotifen is classified here.
- Terfenadine (Japan only) is classified here, in all other countries in R6A.

---

**R4 CHEST RUBS AND OTHER INHALANTS**

---
